Abstract (en)

[origin: WO2011154284A2] The invention relates to a device for scrubbing a metal wire, including means for feeding and running the wire (F), at least two pairs of rotary brushes (21, 22) having a radius r, the axes of which are substantially mutually parallel and substantially perpendicular to the direction in which the wire runs, application means suitable for contacting the brushes with the wire via the circumferences thereof in order to exert a given pressure on the wire (F) while the device is operating, wherein means (31, 32) for adjusting the tension of the wire are provided directly upstream and downstream from the assembly of brushes.
