Abstract (en)
[origin: WO2011154155A1] The invention discloses a steering lead-through for a steering column (2) which is functionally connected to a steering gear (6) via an opening (4) in the floor (5) of a drivers' cab. For this purpose, a mounting (8, 8'), the position of which is stable relative to a tiltable drivers' cab (1) and which comprises a lead-through (8.1, 8.1') for the steering column (3), is located beneath said opening (4). In addition, the steering column protection has an inner gaiter (16) which is pulled or arranged around the steering column (3), above said opening (4) and over the entire opening (4). Moreover, a screening plate (12) can be fitted around the steering column (3) beneath the mounting (8, 8').
