Abstract (en)

[origin: WO2011157658A1] The invention relates to a watercraft with at least one supporting surface (4, 5) which can be vertically adjusted between a position located in the region of the stern (1; 1a) and a position located remotely from the stern (1; 1a). An increased functionality is achieved by virtue of the fact that a recess (6, 7; 6a, 7a) is provided in the stern (1; 1a), which recess(6, 7; 6a, 7a) accommodates the supporting surface (4, 5) in the position located in the region of the stern (1; 1a).
