Abstract (en)

[origin: WO2011155832A1] Method for constructing a ship, comprising the steps of: - manufacturing at least two construction panels by placing an inner plate and an outer plate at a distance, arranging a plurality of transverse beams and at least two longitudinal beams between the inner plate and the outer plate, wherein at least one of the transverse beams protrudes beyond at least one of the outer longitudinal beams, and arranging and curing a foam-like material in a space between the outer transverse beams, the outer longitudinal beams and the inner plate and the outer plate; and - mutually connecting the two construction panels, wherein the two protruding transverse beams of the two construction panels are connected so as to form a frame section.
