Abstract (en)
[origin: WO2011154439A1] The present invention relates to a dryer (1) comprising a body (2) having two side walls (3), a front wall and a rear wall (4), a drum (5) disposed in the body (2), into which the laundry to be dried is placed, a condenser (6) providing the dehumidification of the cooling air used in the drying process by condensing it, a base unit (7) disposed under the drum (5), supporting the motor, the fan, the condenser (6) and other elements required for the drying process, a first opening (8) disposed on the base unit (7), providing the cooling air passing through the condenser (6) to be delivered into the body (2), a second opening (9) disposed on the rear wall (4), providing the cooling air delivered into the body (2) to be discharged to the outer environment, and wherein vibration and noise occurring during the discharge of the cooling air passed over the condenser (6) to the outer environment are reduced.
