Abstract (en)
[origin: WO2011154069A1] The invention relates to a sanitary drain valve (7) having a water drain comprising a drain opening (6) bounded by an inner circumferential wall (4) of the drain valve (7), at which inner circumferential wall (4) an internal thread (3) or similar receptacle is provided, in which a sleeve-shaped drain orifice (5) having an external thread (2) or similar mating receptacle can be threaded in or attached, an insertion cartridge (9) being inserted and/or threaded into the discharge orifice (5), said cartridge comprising an jet regulator. The drain valve (7) according to the invention is characterized in that the drain orifice (5) supports at least one sealing ring (18) on the circumferential wall thereof, said ring radially or axially sealing between the outer circumferential wall (1) of the drain orifice (5) and the inner circumferential wall (4) of the drain valve (7). The drain valve (7) according to the invention is characterized by a reduced production effort and easier maintenance, without sacrificing functionality and seal tightness in the area of the outlet opening (6).
