Abstract (en)  
[origin: WO2011154618A1] The subject of the present invention is a prehung door unit structure intended to close an opening (1), more particularly of rectangular shape, made in a stonework construction (2) such as a wall, rising substantially vertically and separating or demarcating two spaces within a building and, more particularly, within a high-security building, comprising a prehung door unit (3, 4, 5) made up of at least one door leaf (3) mounted so that it can pivot and of a fixed frame (5) intended to be fitted into said opening (1). Such a structure further comprises a fixed-frame pre-frame (10) that can be mounted in the rebate (2') of said opening (1) and constitutes a support for attaching the prehung door unit (3, 4, 5) so that said prehung door unit (3, 4, 5) can be fixed removably into said opening (1) using rigid and removable connecting means (12).
