Abstract (en)

[origin: WO2011154388A2] The present invention relates to a cooling device (1) comprising a fresh food compartment (2) wherein the foods are placed to be cooled, a freezer compartment (3) wherein the foods are placed to be frozen, which is kept at temperatures lower than the fresh food compartment (2), a compressor (4) providing the compression of the refrigerant fluid, at least one fresh food compartment evaporator (5) providing the fresh food compartment (2) to be cooled by providing heat transfer between the refrigerant fluid and the environment, at least one freezer compartment evaporator (6) providing the freezer compartment (3) to be cooled by providing heat transfer between the refrigerant fluid and the environment, a temperature sensor (7) measures the temperature for the control of the refrigeration process.
