Abstract (en)

[origin: EP2581326A1] The sack (3) has neodymium magnets (4) fastened at the sack and provided in a ceiling region of the sack in an upwardly aligned sack aperture (7). The sack aperture is provided in an outer surface of the sack. The magnets are provided at cylinder front ends (9) and the upper cylinder circumference half of the sack in the aperture. The magnets are arranged at an outer side at the sack and welded into the sack. The magnets are arranged in film pockets and glued to the sack, which is used for inside lining of a horizontal cylindrical steel tank (1). The tank is made of ferromagnetic material. An independent claim is also included for a tank.
