Abstract (en)
[origin: EP2581334A1] The system has a housing (2) attached below a cabin door sill (1) and comprising a shaft-door side slot (11). A rollable material (4) is rolled and unrolled by a roll-up device (3). The rollable material is deflected by a deflection device (20) such that the rollable material is pointed in vertical direction after deflecting in an activated state. The roll-up device and the deflection device are arranged in a region of a canopy. The rollable material is held at a free end by a mounting frame (7).
