Abstract (en)

Arrangement (1) for treating liquids, comprises: an UV treatment device (2) and an ion treatment device (5), which are serially and successively arranged in a liquid stream to be treated; a pH-measuring cell and a photometric sensor (4), which are arranged serially and successively between the UV treatment device and the ion treatment device; and a control module (6), which is formed in a controllable manner with the data of pH measurement, the pH-value of the photometric measurement and the data of the photometric measurement of the ion treatment device. Arrangement (1) for treating liquids, comprises: an UV treatment device (2) and an ion treatment device (5), which are serially and successively arranged in a liquid stream to be treated; the pH-measuring cell and the photometric sensor (4), which are arranged serially and successively between the UV treatment device and the ion treatment device, where the sampling stream is designed in a conductive manner through the pH-measuring cell and the photometric sensor; and a control module (6), which is formed in a controllable manner with the data of pH measurement, the pH-value of the photometric measurement and the data of the photometric measurement of the ion treatment device.

Abstract (de)

Die Erfindung betrifft eine Anordnung zur Behandlung von Flüssigkeiten (1), insbesondere zur Wasserbehandlung, wobei eine UV-Behandlungsvorrichtung (2) und eine Ionenbehandlungsvorrichtung (5) in einem zu behandelnden Flüssigkeitsstrom seriell hintereinander angeordnet sind und dass zwischen der UV-Behandlungsvorrichtung (2) und der Ionenbehandlungsvorrichtung (5) parallel zum Flüssigkeitsstrom ein Probenahmestrom durch eine seriell hintereinander angeordnete pH-Messzelle (3) und ein photometrischer Sensor (4) leitbar ausgebildet ist und dass ein Steuermodul (6) vorgesehen ist, welches mit den Daten der pH-Messung den pH-Wert für die photometrische Messung und den Daten der photometrischen Messung die Ionenbehandlungsvorrichtung (5) steuerbar ausgebildet ist.
