Abstract (en)  
[origin: EP2581508A1] The system (10) has a barrier material collection chamber (12) and a collection container (14) for receiving prepurified waste water. The filled collection container is emptied by a pump (34). A produced delivered flow of the exhaust water is pumped into a pressure pipeline (50) through a filter device (32) and the chamber. A housing (58) forms the container. The chamber is provided in the container. The pump is provided outside the housing. The filter device is arranged before the pump outside the housing in a filter box (26), which is provided with a closable mounting opening.
