Abstract (en)
[origin: EP2581658A1] The fixture (100) has a frame (200) and a lighting unit (150) incorporating a lighting module (400) equipped with electroluminescent components e.g. LEDs. The module is placed in a section support (300) i.e. curved structure element, so that the components illuminate a wafer directly or indirectly from a light diffuser (800). An electric connector (500) connects the module with an electrical supply, so that connection is established during assembly of the section in the frame or during the assembly of the module in a profile.
