Abstract (en)

[origin: EP2581924A1] The conversion device has two switches (6A,6B) that are actionable between open and closed states. Mechanism receives input mechanical command to actuate switches. The lever has swiveling axis, and left and right side arms (23A,23B) to operate two switches. The two side arms are arranged on left and right sides opposite relative to swiveling axis. Two switches are located on the left and right sides which are opposite to each other relative to swiveling axis.
