Abstract (en)
[origin: EP2581991A2] The frame (1) has two frame halves (2, 3) latched with each other by linear shifting of one frame half relative to the other frame half into a sliding direction. A projection, recesses and latch parts e.g. detent devices, are provided at the frame halves corresponding to each other. The two frame halves are locked with each other in different detent positions during linear shifting. The frame halves are spaced at different spacing (92) to each other. A guide part and a guide counter part are arranged at one of the frame halves. The recesses are retainers, holes or blind holes. An independent claim is also included for a plug connector module.
