Abstract (en)

[origin: WO2012045493A1] The invention relates to a printing-forme carrier for receiving a plurality of printing formes (06) which in each case have at least one leading or trailing bent end (09), wherein the printing-forme carrier (36; 37) is configured for receiving a plurality of printing formes (06) behind one another, wherein the printing-forme carrier (36; 37) has a longitudinal side (49; 51) with a longitudinal direction (rl) which extends along the leading or trailing end (09) of printing formes to be received, wherein, on the same longitudinal side, the printing-forme carrier (36; 37) has a plurality of holding elements (33) which are spaced apart from one another in a transverse direction of the printing-forme carrier (36; 37), which transverse direction extends perpendicularly with respect to the longitudinal direction (rl) of said printing-forme cylinder (36; 37), in such a way that a plurality of printing formes (06) can be hooked with in each case one bent end (09), offset with respect to one another in a perpendicular direction with respect to the course of the bent end (09), on different holding elements (33) which are spaced apart from one another in a transverse direction (rq) which is perpendicular with respect to the course of the longitudinal direction (rl) of the printing-forme carrier.
