Abstract (en)

[origin: WO2011159220A1] Box for transportation of objects consisting of a lower part (1 1), prepared to be positioned on load carriers (12) placed on a vehicle, a between part (17) and an upper part (13). The volume of the box can be changed from a first smaller volume to a second greater volume when the box (10) is in use, by lifting the upper part (13) from a retracted position to an expanded position. The upper part (13) of the box (10) is held in the expanded position and guided between retracted position and expanded position by supports (23) arranged within the box (10), whereby the supports (23) on each of two opposite sides of the box (10) are connected to each other as a unit, so that the supports (23) on one of the two opposite sides at least are moving parallel.
