Abstract (en)

[origin: WO2011157514A1] Radial tyre (1) for a motor vehicle, comprising: o a crown (2) comprising at least one tread (3) and one crown reinforcement or belt (7); o two inextensible beads (4), two side walls (5) connecting the beads (4) to the tread (3), a carcass reinforcement (6) passing into the two side walls (5) and anchored in the beads (4); o the belt (7), positioned circumferentially between the tread (3) and the carcass reinforcement (6), comprising textile or metal reinforcements coated in a rubber composition (8) referred to as a "belt coating rubber", characterized in that this belt coating rubber, capable of reducing the rolling noise of the tyre, comprises at least one diene elastomer and, as a high-density filler, more than 50 phr of particles referred to as high-density particles having a density of greater than 4 g/cm³.
