Abstract (en)
[origin: WO2011160628A1] The present invention relates to an electronic lock device, comprising a motor lock and an electronic circuit, adapted to be mounted on an existing mechanical lock and to lock or unlock the mechanical lock in response to a signal from an unlocking device. The electronic lock device further comprises a coupling adapted to ensure that the mechanical lock can be operated manually at all times, where the coupling is a disc coupling.
