Abstract (en)
[origin: WO2011157765A1] The invention relates to a lithium electrochemical accumulator comprising a stack of at least two electrochemical cells, each cell being separated from the adjacent cell by a current collecting substrate. A first face of the aforementioned substrate is occupied by an electrode of a cell, while a second face, opposite the first, is occupied by an electrode of the adjacent cell, each cell comprising a positive electrode and a negative electrode separated by an electrolyte. The invention is characterised in that the electrolyte comprises a lithium polysulphide additive.
