Abstract (en)

In a machine (1) for forming and feeding, a succession of segments (2) of double-sided adhesive material is formed from a reel (A) of a tape (13) comprising a portion (18) of double-sided adhesive material having opposite adhesive surfaces at equal or different adhesiveness, and a support tape (19) of the portion (18) of adhesive material; the only portion (18) of double-sided adhesive material is transversely cut to form the succession of segments (2), and the support tape (19) stepwise feed together with the segments (2) in contact with a fixed transfer head (27), wherein each segment (2) is partially detached from the support tape (19) before being adhered upon an outer body (4) forced against the fixed head (27).
