Abstract (en)

[origin: EP2583591A1] The present invention relates to a storage furniture unit comprising a device for moving (1) a relative mattress support, wherein the device has a frame element (10) and a base element (12), movable in relation each other, so that the mattress support can be converted between an inclined configuration and a working configuration. To this purpose, a distal articulation arm (14) and a proximal articulation arm (16) are provided, both acting on the frame element (10) and the base element (12), and a pair of elastic assemblies (18, 20) to facilitate the conversion between said configurations. During the aforesaid conversion one of the elastic assembly (18) works on the proximal arm (16) to keep it substantially static.
