Abstract (en)
[origin: EP2583612A1] There is provided a dishwasher in which washing tub (29) arranged so as to be freely pulled out forward is configured by bottom portion configuring member (41) and washing tub member (40), and air blow path (56) configured by engaging lower divided path (56a), which is integrally formed on bottom portion configuring member (41), and upper divided path (56b), which is integrally formed on washing tub member (40) is arranged. According to such a configuration, the washing water does not come into contact with a joining portion even if the washing water enters air blow path (56), and thus the washing water that enters air blow path (56) can be prevented from leaking out to outside of the washing tub (29) even if used over a long period of time.
