Abstract (en)
[origin: EP2583730A1] A splicing toy is provided, which includes an integrated main body (100) made by plastic or rubber. At least one connector (110) protrudes from the main body (100), and at least one connection slot (120) is recessed in the main body (100). The connector (110) is fitted with the connection slot (120). The toy has an advantage of being enabled to splice a three-dimensional toy with an attractive appearance via fitting the connector (110) with the connection slot (120), and thereby is of benefit to the intelligence.
