Abstract (en)
[origin: EP2584109A1] The level sensor has electrical switch (24) which is coupled to the pressure surface (20), such that switch is operable by movement of pressure surface in first direction of movement. A force generating unit (32) generates force to act in a portion of the movement of pressure surface in first movement direction of pressure surface. A selector (34) selects first state in which force generating unit generates less or no force acting on pressure surface, and second state in which the force generating unit generates force on pressure surface. An independent claim is included for wastewater pump system.
