Abstract (en)  
[origin: EP2584125A2] The curtain lock has a bearing end (4) that lies rotatably in a bearing opening (6) of a lock housing (1). A locking opening (7) is formed in a lock housing (2) for insertion of a locking end (5) associated with a latch element (8). The latch element is inserted and engaged into a locking recess (9) of the locking end during locking position, so that both the bearing end and the locking end are fixed on the lock housings. The outer walls (1',2') of the lock housing are rested against each other in the extension direction of the U-legs of the lock shackle (3).
