Abstract (en)

[origin: EP2584133A1] The method involves temporarily limiting an expansion of a layer (18) of a sealing tape (16) by clamping a thinner stiff layer (20) directly against side walls of a channel-shaped recess or by clamping the stiff layer indirectly against the side walls of the recess by use of an intermediate clamping aid part and a set of retaining elements, which exerts retaining function on the stiff layer. A window frame (24) is installed in an area of the recess during temporary limitation of the expansion of the layer, where the layer expands until the sealing tape rests against the window frame. The retaining elements are flat retaining strips, screws (36) and nails.
