Abstract (en)

[origin: EP2584542A1] The device (10) has an input unit (14) for input of coins (12), and a retainer compartment for retaining the coins. The retainer compartment comprises a storage unit (24) storing the coins, and an output compartment (30) outputs the coins. The storage unit comprises a drive unit i.e. electromotor, moving the retainer compartment along a preset continuous path. The storage unit comprises a removal opening through which the coins are directly supplied to the output compartment. The drive unit moves the retainer compartment at constant velocity.
