Abstract (en)
[origin: WO2011161607A1] The present invention relates to a kit for making a footwear, in particular for orthotic plantar treatment. The kit comprises a sock (12) in fabric, to which a sole (14) is attached, an insole (10) made in polymer material and having a subdivision into a plurality of portions of insole (1, 2, 3, 4, 5, 6, 7) corresponding to analogous parts of the sole of the foot, preferably shaped as shown in figure 1. The aforesaid subdivision is at least partially copied onto the tread of the sole so that one or more of said portions of insole are separable from the insole to be attached to corresponding portions of the sole to form a proprioceptive and/or osteo-articular orthotic correction.
