Abstract (en)  
[origin: WO2011162658A1] The present invention relates to a male incontinence guard (100) comprising a liquid permeable topsheet (101), a backsheet (102), and an absorbent body (103) between the topsheet (101) and the backsheet (102), wherein said guard (100) has a transverse (x) direction and a longitudinal (y) direction and is divided by a transverse dividing line (104) into a front region (105) with a front transverse edge (106) and a rear region (107) with a rear transverse edge (108). The front region (105) has a greater maximum extension in the transverse direction than the maximum extension of the rear region (107) in the transverse direction, and the longitudinal extension of the rear region (107) is 10-60% of the longitudinal extension of the guard (100).
