Abstract (en)

[origin: WO2012001250A1] The present invention relates to a device for removing to the outside of a vehicle, as a vehicle door is closed, the air that is trapped in a volume defined between the double seals that provide sealing between the door and the edge of the body shell of the vehicle delimiting the door opening. According to the invention, the device is characterized in that it comprises at least one vent opening (8) made through a sealing partition (5) closing off the space between a wing (6) and the corresponding body shell side (7) so as to remove the air to the outside through the vent opening (8) in the partition (5). The invention finds an application in the automotive field.
