Abstract (en)
[origin: WO2011161333A1] The overhead installation for transporting people in an urban environment comprises two suspension cables (11) which sag in a curved manner and are spaced apart, on which the rollers (16, 18) of a hangerless vehicle run. In the connection between the rollers and the vehicle are interposed vertically operating actuators, controlled by a central unit so as to reduce the transmission, to the cabin of the vehicle, of unwanted movements resulting from the sag of the cables.
