Abstract (en)

An apparatus for moisturising the bottom side of a mop (9) is provided with a holder (12) in which the mop (9) can be held substantially in vertical position. Laterally directed nozzles (6) are arranged such that spraying of cleaning agent can be effected in approximately horizontal direction against the vertically disposed bottom side of the mop. The spraying is driven by a pump (3) which via a switch (4) and possibly an electronic control system can perform the spraying automatically. By the invention upward spraying of cleaning agent is avoided.
