Abstract (en)

[origin: CN103054710A] The invention relates to an evaporator for applying vapour to body parts. The evaporator comprises: a storage tank (2) for storing disposed liquid, especially water; a pump (4) which is connected with the storage tank (2) to convey the disposed liquid; an evaporimeter (5) which evaporates the disposed liquid conveyed by the pump (4); a vapour line (7) arranged at the downstream of the evaporimeter (5); a mechanism (11) which is for cooling gas stream and especially ambient air at the ambient temperature used for cooling steam flow through a cooling gas line (12); a disposing container (9), wherein the body parts to be disposed can be sent into or attached to the disposing container; a mixed distribution room (8) positioned in the disposing container (9), wherein the vapour line (7) and the cooling gas line (12) are communicated with the mixed distribution room.
