Abstract (en)
[origin: EP2476470A1] The vehicle has running wheels (2-5) attached with an undercarriage (1). A steering actuator operates steering drive element (27) for steering the toy vehicle in different running positions. A steering device (42a) has steering plates (13,19,41) displaced by drive element. The running wheels are linked at different portions of steering plates. A steering change-over unit (21) is selectively switched between primary steering position and secondary steering position relative to the portions of steering plates independent of the steering actuator.
