Abstract (en)  
[origin: EP2586717A1] The shrink tunnel has a shaft wall (50a) that is arranged of a transport plane (TE), which is in parallel to transport direction (TR). The shaft wall is provided with a side surface (52) and upper and lower surfaces (54,55) along with the sides to form a cross-sectional area. The shrink medium (40) flowed into interior portion (34) is flowed out through the side surface of shaft wall. The side surface and upper and lower surfaces of shaft wall are perpendicular to transport plane. The cross-sectional area of the shaft wall is tapered towards the transport plane.
