Abstract (en)

[origin: EP2586895A1] The device has a bearing support connected with a heddle shaft and supporting a bearing (20), where the support defines a changing lane (24). A coupling piece (21) is rotatably held on the bearing. A screw joint (31) is arranged between the support and the bearing for holding the bearing at the bearing support. The support includes straps (22, 23) formed as flat at a side turned away from the bearing. The support comprises a conical seat opening or a stepped seat opening for accommodating the screw joint. The bearing is present between plane surfaces.
