Abstract (en)

[origin: EP2586938A2] The mechanism has a force transmission mechanism comprising a guide pin. The guide pin is adapted to move between one extreme position corresponding to a passive position of a rod (12), and another extreme position corresponding to a safe locking position of the rod. The rod and the guide pin are locked in direction of movement of the rod. A set of hooks (10) is fixed at the rod. The transmission mechanism is arranged with a cam.
