Abstract (en)
[origin: EP2136025A2] The door has a door leaf (10) movable between closed and open positions in which the door leaf closes and releases a wall opening (6), respectively. A transition element (30) forms a transition between the door leaf and a wall (2) in the closed position of the door leaf. The transition element is partially covered by an insulant arrangement (50) on an external periphery of the transition element, where the external periphery is turned away from a space to be closed by a closing element. The insulation arrangement is made of a thermal insulation material.
