Abstract (en)
[origin: EP2586953A2] The bar (5) has two terminal connection strips (7) for connecting the bar with profile elements, and a hollow chamber profile section (11) connected with the connection strips. The hollow chamber profile section is connected with a profile bar section (15). The connection strips are alternatively connected together by the profile bar section. The profile bar section is extended over 20 percent of length of the insulating bar. The chamber profile section is arranged on half the length of the insulating bar, where the insulating bar is made by an extruded profile made of thermoplastic. An independent claim is also included for a heat insulated profile comprising an insulating bar.
