Abstract (en)

[origin: EP2587161A2] The appliance has control unit connected to outer shell. A retractable knob is moved in the direction of reach of the operator's position within the outer shell. A connector (700) is provided with motion transfer element (710) having arm (711) and recess (712) at respective ends, which is rotatably mounted in opening formed in the outer shell. A hinge (720) is movably mounted within recess of motion transfer element to which a valve spindle is mounted, so that the movement of the motion transfer element is transferred to the spindle. A gas valve is controlled by a control knob. One end of the valve is connected to gas pipe and the other end is connected to a burner through connector.
