Abstract (en)

[origin: WO2012000831A1] The invention relates to a machine tool device, in particular a portable machine tool device, comprising a sensor unit (10) that provides, in at least one operational state, at least one sensor signal (12) which is provided for determining a movement relative to a surrounding area. It is suggested that said sensor unit (10) has at least one optical sensor element (14).
