Abstract (en)

[origin: EP2402642A1] The compensator has an inlet pipe (4) and an outlet pipe (5) coaxially fastened to an outlet (12) and an inlet of two pipe sockets (1, 2), respectively, where the outlet pipe is arranged coaxial to the inlet pipe. A fabric compensator (6) interconnects the inlet pipe and the outlet pipe. The two pipe sockets, the inlet and outlet pipes are flow throughable by gas (3) that is loaded with dust. A hollow cylindrical inlet guide plate (7) is fastened at the inlet pipe close to one of the pipe sockets, where radius (21) of the guide plate corresponds to internal radius of the pipe socket.
