Abstract (en)
[origin: WO2013020842A1] The invention relates to a lighting module (10) for an outdoor light (100), having a receiving portion (20) for a circuit board, at least one circuit board (30) that is arranged in said circuit board receiving portion (20) and that comprises a plurality of lighting means (32), particularly in the form of LEDs, as well as a cover (40) which covers both the circuit board receiving portion (20) and the circuit board (30) arranged therein and which comprises a closure pane (41) that is light-permeable in order to let through light produced by said lighting means (32). An optical system (50) is arranged, for each lighting means (32), in the closure pane (41) in order to influence the path of the beam through said closure pane (41). The cover (40) has at least three positioning means (60) for precisely positioning said closure pane (41) in relation to the circuit board (30).
