Abstract (en)  
Disclosed is a cushion for headbands (10) in which a rear cushion cover (50) is connected to a connection case (2) connected to one selected from a welding mask, a working helmet, a protective mask and a safety helmet and a medical device, and a space recess (46) having the shape of a curved surface is formed on the rear surface of the connection case so that a space having the shape of the cushion cover may be formed between a pad of the cushion cover and the rear surface of the connection case when the cushion cover is connected to the rear surface of the connection case, thereby providing excellent cushion feeling to a wearer when contacting the wearer's head and not causing inconvenience even when the cushion for headbands is worn for a long time.
