Abstract (en)

[origin: EP2589545A1] The packaging (10) has a carrying handle (12), which comprises two articles (14) partially enclosed and held together by a shrink film (20), sleeve or similar outer packaging (18). The carrying handle is fixed at the contact points (22) at the outer side of the articles, and partially coincides the contact points with recesses (24) in the outer packaging. The contact points are formed by adhesive joints between outer surface of the article and the carrying handle. The contact points are limited by the recesses. The contact points are partially extended into the outer packaging. Independent claims are included for the following: (1) a method for manufacturing packaging with a carrying handle; and (2) a device for manufacturing packaging with a carrying handle.
