Abstract (en)

[origin: EP2589721A1] The rail has a section support (50) comprising a flat support base (52), where vertical walls project from the base. The base is fitted inside a central compartment, and the vertical walls are provided with coupling ribs. A lateral compartment (66) opens relative to the base. A return flange and a part of the base are provided with gripping ribs that cooperate with snap-fastening tabs carried by a closing lid (73) or a support (74) of a light source (512). Fastening ribs extend in another lateral compartment and cooperate with latching lugs carried by the lid or the support of the source. An independent claim is also included for an adjustable slat facility.
