Abstract (en)
[origin: EP2589734A2] The fitting assembly (10) has a wing part (14) and a frame part (12), where the wing part or the frame part has a base element, which is firmly connected with the frame or with the wing. A mounting clearance is provided between components of the base element interacting in the loaded state of the fitting assembly and components of a length adjustment mechanism interacting in an unloaded state of the fitting assembly in a direction parallel to a swivel axis. The mounting clearance defines a maximum relative displacement between the frame part and the wing part.
