Abstract (en)
[origin: EP2589735A2] The arrangement (10) has a leaf part (14) attached at a leaf, and a frame part (12) formed for attachment at a fixed frame. The leaf part and the frame part are pivotably coupled together around a pivoting axle. The leaf part and the frame part are relatively moved together for adjustment purpose by a length adjustment mechanism of an adjusting unit along direction parallel to the pivoting axle. The length adjustment mechanism is designed in such a manner that the frame part and the leaf part are relatively moved together in direction perpendicular to the pivoting axle.
