Abstract (en)
[origin: EP2589937A1] A verification system (1) for a large-scale weighing machine comprises at least four tension frameworks (11) penetrating through a weighing platform hole (211) preset on a weighing platform surface (21) of the weighing machine (2), for connecting to a weighing platform foundation and being disposed perpendicular to the weighing platform surface, at least four self-location loading-unloading load measuring devices (12) disposed corresponding to the tension frameworks (11), and a constant-load control device (13) connected with the loading-unloading mechanism (121) and allows the loading-unloading mechanism (121) to maintain constant applied load while loading. The self-location loading-unloading load measuring devices (12) includes a self-location loading-unloading mechanism (121) and a high-precision load measuring instrument (122) adjacent to the top side of the loading-unloading mechanism (121). The high-precision load measuring instrument (122) is at least three times larger than an accuracy of the weighing machine (2). The verification system (1) has a rational structure and can greatly improve operating efficiency and safety and save cost.
